

THE TIME MACHINE

Would you have bought it then? Almost no one actually would have.

What rebuilding a past memo teaches about hindsight bias.

THE BIAS

Hindsight bias.

Once you know how the story ends, the earlier decision looks obvious. It wasn't, at the time.

HOW IT WORKS

Pick a past date.

The memo rebuilds using only the price history and news that existed as of that day — nothing that happened after.

WHAT GETS HIDDEN

Old financials aren't shown.

Point-in-time company metrics aren't something we can reliably reconstruct, so they're hidden entirely — not faked with stale numbers.

RATINGS, ROLLED BACK

Analyst ratings roll back too.

To the closest snapshot before that date — not the most recent one available today.

**It's harder to fool yourself
when the tool won't let you.**
